

Product Service Web API: Gets Product from different clients
Order Service: Gets Updated when a new product is added
Payment Service: Gets Updated when a new product is added

Note: The Observer Pattern has not been coded in the product Api , but this can be used to notify the subscribers (Like Order and Payment MicroServices) that a new product has been added.

JWT Token: Json Web Token for securely transmitting data

New Services can be added by updating the appsettings.json in Product Service Web API
